Professional Summary

Computer Science graduate and certified TensorFlow Developer specializing in applied AI, machine learning systems, and LLM engineering. Proven track record in building and deploying production-ready AI workflows, including RAG pipelines, multi-agent systems, and computer vision models. Passionate about engineering scalable, backend-integrated AI applications that solve complex data problems and drive operational efficiency.

Skills

Languages: Python, SQL, TypeScript, JavaScript

AI & Machine Learning: LLM Applications, Agentic AI, RAG, Prompt Engineering, TensorFlow, PyTorch, Scikit-learn, Hugging Face, Transformers

Backend & APIs: FastAPI, Flask, Next.js, REST APIs, PostgreSQL, Supabase, Convex

Infrastructure: Docker, Git, Linux, CI/CD, vLLM, Cloudflare

Data: Vector Databases, Pandas, NumPy, Prisma ORM

Spoken Languages: Indonesian (Native), English (Professional)

Work Experience

LLM Evaluator (Freelance), Outlier.AI – Remote Aug 2024 – June 2026

- Completed **100+ technical evaluation tasks** assessing LLM capabilities across code generation, web development, PyTorch/deep learning model building, and structured data tasks — providing expert-level feedback requiring deep domain knowledge.
- Designed system prompts and adversarial test cases to evaluate multi-step agent reasoning, tool-calling accuracy, and task adherence across complex, real-world technical workflows.
- Identified and documented agent failure patterns across diverse technical domains, delivering structured qualitative feedback to improve LLM reasoning quality, safety, and instruction compliance.

Freelance Fullstack Developer (Client Project), Orla.co – Remote May 2026 – Present

- Engineered an end-to-end commercial luxury e-commerce platform and administrative management portal from scratch for a modest fashion client, handling customer ordering, payments, and automated logistics.
- Built a decoupled two-step checkout architecture with atomic database transactions for inventory reservation, automated 24-hour payment reconciliation, and passwordless email OTP customer authentication.
- Integrated Biteship logistics for real-time multi-courier rate estimation, Leaflet geospatial delivery pin picking, automated courier pickup dispatch, and Cloudflare R2 media storage (backed by 100+ automated tests).

Fullstack Developer (Internship), BIT & PARI – Jakarta Pusat Oct 2024 – Jan 2025

- **Reduced reconciliation processing time by 95%** (from ~45 minutes to ~2 minutes) by optimizing backend data processing logic and database queries, significantly improving operational efficiency.
- Engineered an enterprise data reconciliation system using SQL and relational database systems to automatically validate and match financial transaction records across multiple disparate sources.
- Designed robust data consistency and traceability protocols, ensuring full auditability and accuracy for finance operations.

Projects

Ningsih: AI Personal Chief of Staff

June 2026 – Present

React Native (Expo), Convex, DeepSeek V4 Flash, Whisper, Clerk, RevenueCat

- Built an AI-powered personal chief of staff mobile SaaS designed to help knowledge workers overcome executive dysfunction, time blindness, and calendar overload through natural conversation.
- Architected a real-time conversational agent loop powered by DeepSeek V4 Flash with 10 native tools, 2-way Google Calendar synchronization, and long-term vector memory.
- Integrated hands-free voice transcription via OpenAI Whisper, 3-tier micro-task initiation algorithms to break task inertia, and server-authoritative Freemium subscription gating via RevenueCat.

SignalAtlas: AI Market Intelligence Platform

May 2026 – June 2026

Python, FastAPI, PostgreSQL, Vector DB, LLMs

- Architected a production-ready AI market intelligence platform that continuously discovers emerging business opportunities by mining and clustering customer pain points from large-scale online discussions.
- Integrated multi-domain data ingestion with trend analysis and alert engines to continuously surface actionable market intelligence across multiple domains.
- Deployed a production-ready SaaS backend with REST APIs, scheduled pipelines, and a visualization dashboard within Docker containers.

VentureForge: Autonomous Startup Discovery

May 2026

LangGraph, vLLM, Qwen3-35B, AMD MI300X, Gradio | [GitHub](#)

- Hackathon prototype and conceptual precursor to SignalAtlas; built a multi-agent LangGraph workflow to evaluate startup ideas via real-time Hacker News, Product Hunt API, and YouTube Data API integrations.
- Deployed open-source LLM inference (Qwen3-35B) using vLLM on AMD MI300X GPUs, demonstrating hands-on MLOps experience with high-performance GPU infrastructure.
- Designed structured LLM-based scoring pipelines for market relevance and idea consistency, served through an interactive Gradio web interface.

Ensemble Wayang Kulit Classification

Jul 2025

TensorFlow, InceptionV3, EfficientNetB2, ResNet101V2, Flask | [GitHub](#)

- Developed an ensemble CNN classifier combining InceptionV3, EfficientNetB2, and ResNet101V2 via transfer learning for 22-class Wayang Kulit character recognition.
- Achieved **99.80% test accuracy** while critically identifying pre-existing data leakage in the public Kaggle dataset (augmentation applied prior to partitioning) — demonstrating rigorous ML evaluation methodology.
- Deployed the trained model as a Flask web application for real-time interactive inference and result visualization.

Education

Universitas Negeri Semarang, Bachelor of Computer Science in Computer Science – Indonesia

Aug 2021 – Aug 2025

- GPA: **3.82 / 4.00**

Bangkit Academy, Graduate in Machine Learning Path – Indonesia

Aug 2023 – Dec 2023

- Final score: **93.23 / 100**

Certifications

- TensorFlow Developer Certificate – TensorFlow (May 2024)
- Agentic AI Course Completion – DeepLearning.AI (Apr 2026)
- Bangkit Academy Certificate of Completion – Bangkit Academy (Dec 2023)

Achievements

- 3rd Place – National Data Mining Competition, UNY National IT Competition (UNITY), 2025
